

ADVANCED PRODUCT SAFETY MANAGEMENT COURSE

*Sponsored by Saint Louis University's
John Cook School of Business
Center for Supply Chain Management
In cooperation with
ADK Information Services, LLC*

Saint Louis University, John Cook School of Business

September 24-28, 2018

ABOUT THE COURSE

The 2018 Advanced Product Safety Course will focus on areas that are undergoing significant changes and require understanding by product safety professionals charged with responsibilities to protect their companies and its brands, as well as consumers in the area of product safety. This course is designed for product safety professionals with a minimum of five years of experience or a certificate holder in Saint Louis University's product safety program. The course is designed for product safety managers with backgrounds in, risk management, product development, compliance, engineering, chemists and toxicologists, operations, product integrity, and quality assurance personnel.

➤ Risk Management and Compliance Planning

Recent developments at the Consumer Product Safety Commission (CPSC) have made it clear that companies are expected to both understand and deliver effective compliance plans within their companies. Such plans are now being considered in connection with civil penalties in certain matters and are being considered for inclusion in corrective action plans that are part of product recall agreements. It is clear that companies that lack effective compliance plans will face more difficult discussions and outcomes in dealing with CPSC matters than those companies that have such plans in place and working.

The Advanced course will focus on the design and implementation of such plans including the general context of how compliance plans fit into a companies product safety management system. Risk management, risk assessments, hazard analysis, chemicals management, and data management options will be included in this section.

➤ Regulatory Compliance

In recent years the CPSC has used settlement agreements as the vehicle for requiring that companies design and maintain effective compliance plans and reporting capabilities as a condition of resolving outstanding matters. This represents a shift in emphasis and an understanding of the evolving nature of regulatory requirements both domestically and internationally. The Advanced course will feature a full day of review of current legislation and administrative actions as regulatory tools, trends to be aware of, and strategy options for companies and industry associations with consumer product responsibilities. Class members will hear from domestic and international regulatory attorneys as well as current and former officials of the CPSC in order to sharpen their understanding of regulatory compliance.

The Advanced course will examine regulatory compliance with a focus on

anticipating decisions made by regulators, and an understanding of the importance in maintaining communications between company and regulator.

➤ **International Product Safety Management**

Various country regulatory authorities have made steady progress in increased cooperation and information sharing through a variety of international groups and summit meetings. The CPSC is generally recognized as the driving global leader in consumer product safety. Along with understanding CPSC compliance requirements, companies are paying increased attention to the regulatory requirements in other countries where they are have production operations or are seeking entry or expansion for their product lines. In this context a current understanding of chemicals regulation and risk assessment become important factors to master in every country where a company markets its products. In addition to a focus on these two areas, a senior executive with a consumer product company will review how their company has met the changing environment in international product safety.

The Advanced course will include a focus on regulations governing product safety in the EU, UK, Canada, and Australia/New Zealand requirements and certifications for importing products into and exporting products out of countries, and warnings and label requirements.

➤ **General Product Safety Management**

Insight into how a company manages risk and develops an overall compliance program will be presented in a case study format by a leading product safety professional. While safety programs may vary from industry to industry, there are certain common principles and approaches that characterize every effective product safety system. This session, along with a team exercise based on a product safety compliance issue or concern, will serve as a summary for the week's program. Following these activities, a product safety leader will provide reflections on how individuals can affect their company, industry, and society through the use of tools and resources available to every professional.

Course Tuition: \$4,900

Fee includes course materials, breakfast and lunch, parking, and participation in annual alumni reception at ICPHSO.

VISITING ST. LOUIS

Saint Louis University is located in a thriving urban area filled with lodging options, from boutique to budget. One convenient location to consider is the University-owned Hotel Ignacio, 3 blocks from the Cook School of Business where all classes take place.

Hotel Ignacio
3411 Olive St.
St. Louis, MO 63103
(314) 977-4411

An exceptional boutique hotel just steps away from Saint Louis University's campus, Hotel Ignacio offers 49 well-appointed guest rooms and two suites with unique themes -- fine art, performing arts, architecture and music -- that showcase its location in the city's arts center. Although no two rooms are designed exactly alike, they all offer Tempur-Pedic mattresses as well as organic bamboo sheets and towels. The hotel also has the distinction of being the first hotel in North America to offer Avaya Guest Media Hubs -- cutting-edge, multi-media communication devices -- in all of its rooms.
